

Horizon Small/Mid-Cap Core Equity ETF

SMOX

Before you invest, you may want to review the Prospectus for the Small/Mid Cap Core Equity ETF (as defined below), which contains more information about the Dividend Income Fund and its risks. The current statutory Prospectus and Statement of Additional Information (“SAI”) dated November 3, 2025, are incorporated by reference into this Summary Prospectus. You can find the Dividend Income Fund’s Prospectus, SAI, reports to shareholders, and other information about the Small/Mid Cap Core Equity ETF online at www.horizonmutualfunds.com. You can also get this information at no cost by calling 1-855-754-7932 or by sending an e-mail request to funds@horizoninvestments.com.

Investment Objective

The Horizon Small/Mid Cap Core Equity ETF (the “Small/Mid Cap Core Equity Fund” or the “Fund”) seeks capital appreciation.

Fees and Expenses of the Small/Mid Cap Core Equity Fund

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Small/Mid Cap Core Equity Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.75%
Distribution and/or Service (12b-1) Fees	None
Other Expenses ⁽¹⁾	0.00%
Total Annual Fund Operating Expenses	0.75%

⁽¹⁾ “Other Expenses” are estimated for the current fiscal year.

Example: This Example is intended to help you compare the cost of investing in the Small/Mid Cap Core Equity Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Small/Mid Cap Core Equity Fund for the time periods indicated and then sell all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Small/Mid Cap Core Equity Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based upon these assumptions your costs would be:

	1 Year	3 Years
	\$77	\$240

Portfolio Turnover

The Small/Mid Cap Core Equity Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Small/Mid Cap Core Equity Fund’s performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies of the Small/Mid Cap Core Equity Fund

The Small/Mid Cap Core Equity Fund is an actively managed exchange-traded fund (“ETF”) that seeks to achieve its investment objective by investing primarily in equity securities of U.S. small- and mid-capitalization companies, including common stocks and Real Estate Investment Trusts (REITs). Under normal circumstances, the Fund will invest at least 80% of the value of its net assets in the equity securities of small and mid-cap issuers. The Fund’s investment adviser, Horizon Investments, LLC (“Horizon”), generally considers small and mid-cap issuers to be those that are within the range of the S&P 600 and S&P 400 indices, respectively, when purchased.

The Fund’s investment adviser, Horizon Investments, LLC (“Horizon”), employs a flexible approach that combines active management and quantitative models to allocate the Fund’s portfolio among issuers, sectors, and/or factors (such as growth, value, momentum, quality, size, and volatility). Horizon selects securities believed to offer the highest projected return for a given level of risk, using a multi-disciplinary approach that includes economic, quantitative, and fundamental analysis.

The Fund may engage in frequent trading to achieve its objective and, depending on Horizon’s outlook and market conditions, may focus its investments in particular sectors or areas of the economy.

Options: The Fund may, at times, seek to generate income through the use of an options strategy involving primarily put spreads on broad-based securities indices (including, without limitation, the S&P 500) or ETFs that track broad-based securities indices. Put spread transactions consist of a sold put option on a portion of the Fund’s portfolio, and purchased put option of the same maturity with a lower strike price. The Fund seeks to generate income from the sold put options while the purchased put options with a lower strike are used to hedge against a decline of the option’s reference asset. The use of this strategy is expected to increase the Fund’s volatility. Options purchased by the Fund will generally be exchange-traded (including Flexible Exchange Options (“FLEX Options”). FLEX Options are customizable exchange-traded option contracts guaranteed for settlement by the Options Clearing Corporation (the “OCC”). Terms that can be customized for FLEX Options include exercise price, exercise styles, and expiration dates.

During periods where the U.S. equity market is relatively stable or rising in value such that the option premiums received by the Fund exceed the change in value of the sold put option, the strategy may outperform an otherwise similar strategy that does not sell put options. Alternatively, during periods of falling markets where gains in the sold put options exceed the premiums received, the strategy would be expected to underperform an otherwise similar strategy with no sold put options. In those cases, however, losses will be hedged at values of the reference asset below the strike price of the long-put option.

The Fund’s use of options may be opportunistic and vary based on Horizon’s market outlook, risk assessment, and portfolio management objectives. The Fund may also use options for hedging purposes, to manage portfolio risk, or to enhance return potential in a cost-effective manner. The Fund’s investment strategies, including its use of options, are subject to change based on Horizon’s ongoing assessment of market conditions and the investment opportunities available.

Principal Risks of the Small/Mid Cap Core Equity Fund

Many factors affect the Small/Mid Cap Core Equity Fund’s performance. The Small/Mid Cap Core Equity Fund is not federally insured or guaranteed by any government agency. You may lose money by investing in the Fund and there is no guarantee that the Fund will achieve its investment objective. The principal risks affecting shareholders’ investments in the Fund are set forth below.

Management Risk. The ability of the Fund to meet its investment objective is directly related to the allocation of the Fund’s assets. Horizon may allocate the Fund’s investments so as to under-emphasize or over-emphasize investments at the wrong times or under the wrong market conditions, in which case the Fund’s value may be adversely affected.

Market Risk. Investments in securities in general are subject to market risks that may cause their prices to fluctuate over time. The Fund’s investments may decline in value due to factors affecting securities markets generally, or particular countries, segments, economic sectors, industries or companies within those markets. The value of a security may decline due to general economic and market conditions that are not specifically related to a particular issuer. Markets may, in response to governmental actions or intervention, economic or market developments, trade disputes, the spread of infectious illness or other public health issues, geopolitical factors or other external factors,

experience periods of high volatility and reduced liquidity, and, in extreme cases, may lead to trading restrictions and halts. These and other similar events could be prolonged and could adversely affect the value and liquidity of the Fund's investments and negatively impact the Fund's performance.

Equity Securities Risk. Equity securities typically have greater price volatility than fixed income securities. The market price of equity securities owned by the Fund may decline due to factors affecting equity markets generally, particular industries, or specific companies.

Smaller and Medium Issuer Risk. Small and medium capitalization companies may be more vulnerable than larger, more established organizations to adverse business or economic developments. In addition, small and medium capitalization companies may be particularly affected by interest rate increases, as they may find it more difficult to borrow money to continue or expand operations, or may have difficulty in repaying any loans.

REIT Risk. Investments in REITs involve risks similar to those associated with direct investments in real estate, including sensitivity to changes in interest rates, property values, and rental income. REITs are also subject to risks related to the management and operation of properties, as well as the risk that the Fund may experience delays or losses if a REIT is liquidated or declares bankruptcy. Additionally, REITs may fail to qualify for favorable tax treatment under the Internal Revenue Code of 1986, as amended (the "Code"), which could adversely affect their value.

Options Risk. Investments in options involve risks different from, or possibly greater than, the risks associated with investing directly in securities, including leverage risk, tracking risk. Option positions may expire worthless, exposing the Fund to potentially significant losses. If the Fund writes options, it may receive a premium that is small relative to the loss realized in the event of adverse changes in the value of the underlying instruments. When the Fund utilizes options combinations, such as spreads, straddles, collars, or other strategies, the premium received for writing the call option may offset, in part, the premium paid to purchase the corresponding put option; however, these strategies may limit upside gains while not fully protecting against downside risks, and the cost of implementing them may reduce the Fund's overall returns. To the extent a Fund writes options on individual securities that it does not hold in its portfolio (i.e., "naked" options), it is subject to the risk that a liquid market for the underlying security may not exist at the time an option is exercised or when the Fund otherwise seeks to close out an option position. Naked call options, in particular, have speculative characteristics and the potential for unlimited loss.

FLEX Options. FLEX Options are guaranteed for settlement by the OCC. Although unlikely, it is possible the OCC is unable to meet its settlement obligations, which could result in substantial loss for the Fund. FLEX Options may be less liquid than more traditional exchange-traded option contracts, meaning that the Fund may have more difficulty closing out certain FLEX Options positions at desired times and prices. Upon expiration, the FLEX Options held by the Fund will be exercisable at the strike price. Prior to the expiration date, the value of the FLEX Options will be determined based upon market quotations or using other recognized pricing methods. The value of the FLEX Options prior to the expiration date may vary due to factors other than the value of underlying asset, such as interest rate changes, changing supply and demand, decreased liquidity of the FLEX Options, a change in the actual and perceived volatility of the stock market and underlying asset, and the remaining time to expiration.

Sector and Focus Risk. To the extent that the Fund focuses its investments in particular industries, asset classes or sectors of the economy, any market price movements, regulatory or technological changes, or economic conditions affecting companies in those industries, asset classes or sectors may have a significant impact on the Fund's performance.

Frequent Trading and Portfolio Turnover Risk. The Fund may engage in frequent trading to achieve its investment objectives, which could result in higher transaction costs and taxable gains, negatively impacting performance. As an ETF, the Fund may also experience active trading of its shares in the market, which could lead to more frequent creation or redemption activities. In certain circumstances, this activity could increase the number of portfolio transactions, resulting in high portfolio turnover. High levels of portfolio turnover may increase brokerage and other transaction costs and could lead to increased taxable capital gains. These factors, in combination with the Fund's pursuit of its investment objectives, could have a negative impact on the Fund's overall performance.

Quantitative Model Risk. The Fund’s strategy relies heavily on quantitative models and the analysis of specific metrics to construct the Fund’s portfolio. The impact of these metrics on a stock’s performance can be difficult to predict, and stocks that previously possessed certain desirable quantitative characteristics may not continue to demonstrate those same characteristics in the future. In addition, relying on quantitative models entails the risk that the models themselves may be limited or incorrect, that the data on which the models rely may be incorrect or incomplete, and that Horizon may not be successful in selecting companies for investment or determining the weighting of particular stocks in the Fund’s portfolio. Any of these factors could cause the Fund to underperform funds with similar strategies that do not select stocks based on quantitative analysis.

ETF Risks. The Fund is an ETF. As result of this structure, the Fund is exposed directly or indirectly to the following risks:

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. Only an Authorized Participant (an “Authorized Participant” or an “AP”) may engage in creation and redemption transactions directly with an ETF. The Fund has a limited number of financial institutions that may act as Authorized Participants. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent that: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform such functions, Fund shares may trade at a material discount to NAV, the bid-ask spread could widen, and shares could face trading halts and/or delisting.

Costs of Buying or Selling Shares. Investors buying or selling Fund shares in the secondary market will pay brokerage commissions or other charges imposed by brokers as determined by those brokers. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. In addition, secondary market investors will also incur the cost of the difference between the price that an investor is willing to pay for Fund shares (the “bid” price) and the price at which an investor is willing to sell Fund shares (the “ask” price). This difference in bid and ask prices is often referred to as the “spread” or “bid/ask spread”. The bid/ask spread varies over time for Fund shares based on trading volume and market liquidity and is generally lower if the Fund’s shares have more trading volume and market liquidity and higher if the Fund’s shares have little trading volume and market liquidity. Further, increased market volatility may cause increased bid/ask spreads. Due to the costs of buying or selling Fund shares, including bid/ask spreads, frequent trading of Fund shares may significantly reduce investment results and an investment in Fund shares may not be advisable for investors who anticipate regularly making small investments.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Fund shares may be bought and sold in the secondary market at market prices. The market prices of the shares will generally fluctuate in accordance with changes in NAV as well as the relative supply of and demand for the shares on the exchange and there may be times when the market price of Fund shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Fund shares or during periods of market volatility. If an investor buys Fund shares when the shares’ market price is at a premium, the investor may pay more than the shares’ underlying value. If an investor sells Fund shares when the shares’ market price is at a discount, the investor may receive less than the shares’ underlying value. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Fund shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Fund shares are listed for trading on the NYSE Arca, Inc. (“Exchange”) and may be traded on U.S. exchanges other than Exchange, there can be no assurance that an active trading market will develop or be maintained for Fund shares or that Fund shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Fund shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Fund shares and could lead to differences between the market price of the Fund’s shares and the underlying value of those shares. These conditions could cause the Fund’s shares to trade at a material discount to NAV and the bid-ask spread to widen.

Trading Issues. Trading in shares on an exchange may be halted due to market conditions or for reasons that, in the view of the exchange, make trading in shares inadvisable. In addition, trading in shares on an exchange is subject to trading halts caused by extraordinary market volatility pursuant to the exchange's "circuit breaker" rules. There can be no assurance that the requirements of an exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. Shares of the Fund, similar to shares of other issuers listed on a stock exchange, may be sold short and are therefore subject to the risk of increased volatility and price decreases associated with being sold short.

Domestic Strategy Risk. Because the Fund will invest primarily in securities of U.S. issuers, the Fund is subject to the risk that certain changes in the U.S. economy, such as when the U.S. economy weakens or when its financial markets decline, may have an adverse effect on the securities to which the Fund has exposure, and the Fund will be restricted in its ability to allocate its investments to the securities of non-U.S. issuers.

Operational and Technology Risk. Cyber-attacks, disruptions, or failures that affect the Fund's service providers or counterparties, issuers of securities held by the Fund, or other market participants may adversely affect the Fund and its shareholders, including by causing losses for the Fund or impairing its operations.

New Fund Risk. The Fund is recently organized and has no operating history as of the date of this Prospectus. There can be no assurance that the Fund will grow to or maintain an economically viable size.

Performance

The Fund is new and therefore does not have performance history for a full calendar year. Once the Fund has completed a full calendar year of operations, a bar chart and table will be included that will provide some indication of the risks of investing in the Fund by showing the variability of the Fund's returns and comparing the Fund's performance to a broad measure of market performance. Updated performance information is available at no cost by visiting www.horizonmutualfunds.com or by calling 1-855-754-7932.

Investment Adviser. Horizon Investments, LLC.

Sub-Adviser: Exchange Traded Concepts, LLC.

Portfolio Managers. Scott Ladner, Chief Investment Officer of Horizon, Mike Dickson, Ph.D., Head of Research and Quantitative Strategies of Horizon, Zachary F. Hill, CFA, Head of Portfolio Management of Horizon, and Clark Allen, Head of ETFs of Horizon, share responsibility for the day-to-day management of the Small/Mid Cap Core Equity Fund as Co-Portfolio Managers and have each been a Co-Portfolio Manager of the Small/Mid Cap Core Equity Fund since inception.

Purchase and Sale of Fund Shares. Individual shares may only be purchased and sold on a national securities exchange through a broker-dealer. You can purchase and sell individual shares of the Fund throughout the trading day like any publicly traded security. The Fund's shares are listed on the Exchange. The price of the Fund's shares is based on market price and, because exchange-traded fund shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (premium) or less than NAV (discount). The Fund issues and redeems shares on a continuous basis, at NAV, only in blocks of shares called Creation Units, principally in-kind, and only Authorized Participants (typically, broker-dealers) may purchase or redeem Creation Units. When buying or selling the Fund's shares on Exchange, you may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) (the "bid-ask spread"). Recent information regarding the Fund's NAV, market price, premiums and discounts, and bid-ask spreads is available at www.horizonmutualfunds.com.

Tax Information

The Small/Mid Cap Core Equity Fund's distributions are taxed as ordinary income or capital gains, unless you are investing through a tax-deferred arrangement, such as a 401(k) plan or an individual retirement account ("IRA"). Such tax-deferred arrangements may be taxed later upon withdrawal of monies from those arrangements.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase the Small/Mid Cap Core Equity Fund through a broker-dealer or other financial intermediary (such as a bank), the Small/Mid Cap Core Equity Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Small/Mid Cap Core Equity Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.
